- **Modified upgr15 geom with only PXL :**
  - Plot upper left : Tree of the geometry volumes : SSD and IST are not present (✔) (IBMO)
- **Tried with patch and in SL08f :**
  - The geometry is correctly built but the BFC chain crashes
- **Then I tried in DEV :**
  - Geometry is correctly built and BFC works
  - Upper right plot : global coordinates of the FIRST hit on track : it is either from the PIXEL inner layer or the TPC (✔) [*sample is few events with single pions*]

- Quick news from the agml side :

  1. the corrected pixl geometry is in placed

  2. The new beam should be in placed soon.
