

Documentation Discussion

F.Videbaek

BNL

- Version controlled documents, approved documents.
 - Project formal DOE related documents (ProjectExecutionPlan, RiskManagementPlan,..) resides with CPM. In essence only latest is relevant
 - Design documents, specifications, models (mechanical), drawings, electronics layouts, software specifications
 - Operational and installation procedures

Software

- Offline, Online
 - code: use the standard STAR system for code repository, and approval of code (Makers...)
 - Online (assume is similar to above?)
 - Analysis code (can I get the code used for CCD-response w/o asking indiv. People?)
 - Slow controls

Other documents

- Formal reports.
- Informal reports
- Pictures.

Options for discussion (recall different requirements)

- Adept
 - Chosen for models, STAR drawing repository, interfaces with solid works.
 - Can also be used for regular documents. Allows versions, workflow (i.e. approval process) ownerships.
- E-room
 - Also access and versioning; workflow?
- DocDB
 - Handles documents, version, approval
 - Not in use in STAR, needs admin.
- STAR notes
 - Flat files, keyword search, rudimentary way for approved documents ; have different categories like sn, csn,psn (reg notes, controlled, physics), no workflow, versions
 - Could properly get another series.
- Use STAR protected area, and/or external sites (e.g. rbnc web pages).
 - Usefull for reports.
- Drupal
 - Organize in books, some control (groups). Hard to do specific searches as far I can see.
